# TRAFFIC MONITORING SYSTEM

## OBJECTIVE-

Traffic congestion is increasing day by day in the major cities of developed countries .To overcome this problem, in the traffic monitoring system is more reliable, and smarter different methods have been implemented.

## FUNCTIONALITIES-

Optimise the  transport network with sensing technology that delivers the information users want to know, and monitors and reports on network issues

- Improve traffic flows
- Help improve road safety, reduce emissions, and increase air quality
- Gain untapped insights to manage your road and transport networks better

## CONSTRAINT-

Heterogeneous data integration

Data management and big data issues

Traffic condition representation and hazards identification

Alternative route guidance

Security and privacy
